

Covid-19 is not over

Protect yourself – get vaccinated!

PLATINUM
HEALTH

The Covid-19 pandemic is not over, and experts expect another wave soon.

Platinum Health members who are not vaccinated, should get vaccinated as soon as possible as the vaccine provides protection against severe illness and death.

There is also a need for booster doses especially in high-risk groups, e.g., the elderly, people who are immuno-compromised, or people who are suffering from underlying conditions such as high blood pressure, diabetes, cancer, chronic kidney diseases, etc.

Vaccination is important to maintain immunity against severe infections.

**GET VACCINATED
TO BE SAFE.**
