

HIV+ patients at increased risk if infected with COVID-19

PLATINUM
HEALTH

Platinum Health members living with HIV have three times greater chance of dying if they get infected with COVID-19.

Members who are HIV+ and not on treatment are therefore urged to consult at their closest Platinum Health facility and go onto Anti-retroviral (ARV) treatment as soon as possible.

HIV patients on treatment whose viral load is not suppressed should ensure they take their medication daily as prescribed.
